OVERVIEW

We are offering high-quality lighting and security services to government entities, schools and large corporations in, USA, Middle East, Latin America, Europe, Southeast Asia and India. LEDOLAS provides funding programs which covers all costs of the integrated solution including:

- equipment
- installation
- operations
- maintenance
- product replacements
- shipping and taxes.

The government or corporation has zero upfront cost and makes 12 payments every year for the lighting and/or security service for the duration of the service contract. At the end of the contract term, customer receives ownership of the lighting and/or security service.

SOLUTION

The primary integrated solution entails a LED street light with a 4-camera dome-based video surveillance solution on a new or existing street pole. The surveillance security solution includes the design, development, installation and operations of a security operations center ("SOC"). Every head contains five cables ready to connect to future technologies for value added services.

Here is a snapshot of the preferred products of the bundled solution:

Lighting System

Cameras

Security Operations Center

Installation

WiFi

Network Communicator

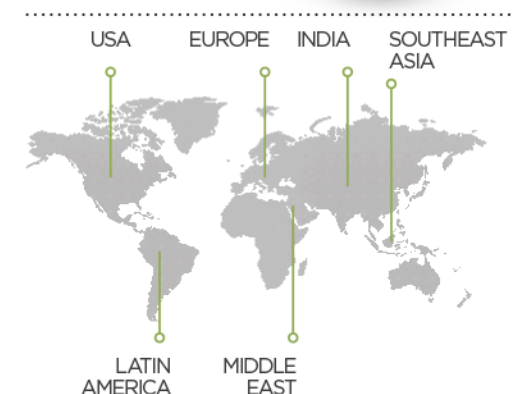

SL Series B LED Street Light & Controller

SurroundVideo Omni IP Megapixel Cameras

Enterprise MultiPoint Control Room Management System

Funding for your own maintenance team or select installation vendor of your choice.

COMMAND AND CONTROL CHART

Monitoring for Unauthorized Access with Interdiction - A motion sensor is alerted to movement at strategic locations. This triggers an investigation by aiming a camera at the particular point. If selected behavior is seen a drone will be dispatched to fly above the area to monitor and count the people involved and take photos. Unmanned afloat systems (WAM-V) perform support roles as needed in the water.
